Design and planning of three-story recreation and commercial complex with certain terrain restrictions - center escalator, rear entrance, massive pillars, balconies, and low ceilings. The diagonal paving helped to unify three well-known brands represented side by side. The Fruit Salad buffet uses the bright color of the brand to create an inviting visual effect with elements on the floor, ceiling, and columns. In the Nafisse deli, a modern interpretation was given to oriental motifs. The columns cladding was done with 3D printing technology, combined with advertising and promotional areas.

We are proud to be part of a joint venture with our neighbors to create an area that is primarily about entertainment and enjoyment.
